

ENVIRONMENTAL POLICY STATEMENT

The Ingenious Air Company imports, designs, supplies, installs and maintains the Hi-Velocity small duct system for projects requiring air conditioning, heating, ventilation and air purification.

We recognise that our operations inevitably have an impact on the environment, and are committed to preventing and minimising this impact as much as reasonably possible.

We actively incorporate environmental factors into business decisions and when planning and implementing projects.

All new employees receive a copy of this policy at induction and are briefed on their responsibilities. We provide training to raise awareness of environmental issues and continually improve our environmental performance by discussing ideas or concerns at team meetings.

We use our resources and materials as wisely and efficiently as possible and continually look to reduce the carbon footprint of our operations. We source and promote environmentally-friendly and energy saving products.

We reduce, re-use or recycle our waste as much as practically possible.

We manage and dispose of all waste that we cannot reduce, re-use or re-cycle in a safe and responsible manner.

We comply with all relevant environmental legislation.

We encourage our customers, suppliers and sub-contractors to comply with this policy.

This policy is reviewed annually and updated as necessary.
